Defence Trade Controls: Dual-Use items

KEY

*Experimental or theoretical work undertaken principally to acquire new knowledge of the fundamental principles of phenomena or observable facts, not primarily directed towards a specific practical aim or objective.

**This exemption applies to equipment that incorporates an item controlled in the dual use section (Part 2) of the DSGL. This exemption does not include equipment that simply has a medical end-use. For example, certain cryocoolers that are part of nuclear magnetic resonance (NMR) machines are controlled, however, the NMR machine is specifically designed for medical end-use and therefore does not require a permit for export even though it contains a controlled item.

***Note: Oral supply (i.e. via phone), supply for pre-publication purposes, supply wholly within or outside Australia, supply within the same legal entity/between controlled entities (i.e. JCUA and JCUS) and publication of dual-use items is not controlled.
