Rosie Kinnaird - 2022 Mentor Leader

Zoology and Ecology

CAREER PATH: As I am majoring in Zoology and Ecology, I am set to finish my degree in late 2022, however I am still unsure of what I will do after my course! I know that I would love to work in the field of environmental conservation, so time will tell where I go after next year.

ABOUT ME: I was born in the Northern Territory, finished primary school in the Atherton Tablelands and then graduated high school from Cairns State High, which then led me to study at JCU. My family and I share a common passion for Australian native flora and fauna, so I was pretty stoked to study science at university.

FUN FACT: I have dance competitively for the past 14 years, yet I still have the co-ordination of a toddler.

Richard Cann

Earth Science, Zoology and Ecology

CAREER PATH: Earth Science and/or naturalist. Either way, I'd need to be in a position that would allow me to venture outdoors!

ABOUT ME: I'm originally from England but have spent most of my lifetime in Australia. In my spare time, if I'm not kicking a football (round ball version) around, you'll find me either keeping fit and active or travelling, as I love exploring new places.

FUN FACT: My Uncle taught Ed Sheeran in school.

Ruben Crea

Earth Science, Zoology and Ecology

CAREER PATH: When I graduate, I am interested in becoming a field researcher as I enjoy studying animals in their natural habitats and understanding their roles in the ecosystem they inhabit. I have a particular interest in reptiles and amphibians.

ABOUT ME: Originally from Victoria, I have been living in Far North Queensland for the past 7 years with my parents and younger siblings. In my spare time I enjoy learning about human and natural history, historical martial arts, and the captive care of reptiles.

FUN FACT: I currently also volunteer at a local zoo and maintain a small but growing collection of pet reptiles at home.
