

AQUACULTURE SCIENCE AND TECHNOLOGY CAREER SNAPSHOT

Aquaculture at JCU

Australia's marine environment is the world's third largest marine jurisdiction at 13.86 million square kilometres¹ (including 8M sq. kms Australian Fishing Zone), however due to relatively low biological productivity, Australia is a minor producer of fisheries products⁵.

In 2018 world aquaculture and fisheries production recorded 178.5 million tonnes of live weight², while in Australia the wildcatch volume was 173,434 tonnes and aquaculture volume was 97,672 tonnes amounting to the total of AU\$3.18 billion³. The size of employment in aquaculture and fishing across Australia is estimated 9,745 individuals³ with largest employment in Tasmania. You will find more comprehensive information in the [Australian fisheries and aquaculture statistics](#) compiled by the Department of Agriculture and Water Resources ABARES (accessed December 2020) and on IBISWorld ([Industry Report Aquaculture in Australia](#)) available for free access through the JCU Library website. According to the business analysts at Stockhead, the aquaculture industry is poised for a healthy growth⁴.

JCU is one of the leading aquaculture research and innovation institutions in the world with institutes such as [Marine and Aquaculture Research Facility](#), [Sustainable Tropical Fisheries and Aquaculture](#) and a number of partnerships such as [International Center for Biosaline Agriculture](#) in the UAE, [Tropical Futures Institute](#) or [Aquaculture Innovation Centre](#) in Singapore offers ample opportunities to build your cutting edge knowledge and develop current practical skills. The course focuses on tropical species including shrimp/prawns, pearl oysters, groupers, crabs and barramundi production. You will learn about aquaculture principles and practices, species farmed, aquatic animal ecophysiology, design of aquaculture systems, feeding and nutrition, pathobiology, propagation

techniques, stock improvement, and sustainable aquaculture practices.

All sources below were accessed in 12/20.

Understanding Options & Preparing Your Career

Aquaculture Science and Technology can lead to work in hatcheries, grow-out production, aquaculture supply companies, developing stock nutrition programs, designing water supply systems, research and development programs - or in the many aligned industries and government bodies servicing aquaculture including planning, strategy and policy development, teaching and trade.

You could be employed as a supervisor, technical manager or chief operations manager in pearl cultivation, or producing luxury foods such as oysters, prawns and finfish, or pursue research with organisations such as CSIRO developing resilient species with more immunity to disease and climate heating, or take up freelance consulting work for smaller organisations that do not keep a full time specialist.

Check [Rural Skills Australia](#) and [Business Queensland \(aquaculture\)](#) for further information on pathways in aquaculture.

Graduates may choose to undertake postgraduate study in order to specialise in a particular area of interest within their discipline (e.g. genetics) or pursue further studies in an area outside of science.

Review [JCU Alumni](#) listed on LinkedIn who have included "aquaculture" in their profiles. The top 20 employers include a number of universities, Australian Institute of Marine Science, Australian Government Department of Agriculture and Water Resources, NOAA (National Oceanic & Atmospheric Administration), Tassal

Operations, Department of Fisheries Western Australia, CSIRO, Department of Agriculture and Fisheries (Queensland), Pacific Bio/MBD Energy (bioremediation, wastewater treatment with algae, astaxanthin production and nutraceuticals), Institute of Marine Research (IMR) Norway, NSW Department of Planning, Industry and Environment, Cawthron Institute. (Retrieved December 2020)

Take time to review career paths of JCU alumni, note the organisations and positions that led them where they are now, the professional groups they have joined on LinkedIn and consider inviting them to connect and ask them some questions about their career progression and what made them successful.

To understand current demand areas and the scope of roles available, tasks involved, knowledge and skills sought by employers, search weekly current vacancies in the following websites and save interesting positions for future reference. You may be able to apply for or negotiate with some of these employers, skill development opportunities before graduation, such as farm work, vacation work and internships.

- [Aquaculture Talent](#)

Stand out: Gain Skills & Experience While at Uni

Develop your skill development plan by reviewing [JCU Job Ready](#).

While your course will provide you with the professional knowledge and skills, be proactive, make a plan and work towards filling any skill, knowledge or experience gaps you identify based on your research of job adverts (as explained above), so that you are competitive when entering the graduate labour market.

Your time at the university could be turned into a streak of deliberate skill development exercises. Some activities do not require any previous experience, e.g. joining a [student club](#) and teams within (projects, events, campaigns, managing the club and its finances, recruiting new members, managing the Facebook page, etc.). Student clubs are a great way to start building experience and confidence. You could also participate in the [Mentor Program](#) to develop your consulting and leadership skills first as a mentee and later as a mentor. Another great opportunity to develop teamwork and cross-disciplinary collaboration, leadership, project management and communication skills including presenting and selling your solutions to the client (pitching) are [student competitions](#) (e.g. *Thought for Food Challenge*, *Ideas for Action*, *Go Green in the City*, *ClimateLaunchpad*, *Famelab*, *Top100 Future Leaders Competition* etc.). Participation in those competitions is proof to employers that you have enterprising skills (identifying problems and taking initiative to use your skills and networks to address them). If you develop a taste for entrepreneurship and want to find out more you might like to contact:

- [JCU Connect](#)
- [Hatch](#)

Undertaking a [Study Abroad](#) semester included in your study, for example in the Asian Aquaculture hub Singapore, where JCU has an established campus, could be a great way to develop international industry networks, your global acumen, cultural sensitivity, resilience and adaptability.

Volunteering in a [general](#) or an environmental role provides an opportunity to give back to the community, develop work skills and networks. Opportunities can be sourced from:

- [Australian Marine Parks](#)
- [Redmap](#)
- [Wet Tropics Management Authority](#)
- [Conservation Volunteers](#)
- [Australian Wildlife Conservancy](#)
- [Seek Volunteer](#)
- [Volunteering North Queensland](#)
- [Townsville City Council Community Directory](#)
- [Cairns City Council Community Directory](#)
- [Orpheus Island Research Station](#)
- [JCU TropWATER](#)

Engaging in a [part time job](#) and [mapping out the transferable skills](#) you develop would also be highly regarded by future employers.

You may be able to engage in a [placement subject](#) as part of your study that could give you an opportunity to get a taste of working in your industry.

Build Your Professional Networks

Building your networks will increase your knowledge of your profession, grow your reputation with potential future employers and help you identify opportunities. Employers prefer to recruit someone they know or have met so take advantage of every opportunity to meet professionals.

Attend Key Events such as the

- [Annual JCU Careers Fair](#)
- [JCU TESS Seminars](#)
- [JCU Market Day](#)
- Industry Panels
- Information Sessions advertised through the [Career Hub](#).

For further ideas check the [Connecting with Professionals](#) page on our website.

You are encouraged to investigate relevant Professional Associations and Peak Bodies to gain greater awareness of developments and opportunities within your future industry area. A number of Professional Associations offer discounted membership fees to students.

The benefits include access to industry news and trends, career opportunities, networking events, mentoring programs, online learning, conferences and other professional development opportunities. Membership sends a clear signal to employers about commitment to your future profession and ongoing professional development.

- [World Aquaculture Society](#)
- [Australian Marine Sciences Association](#)
- [Australian Society for Fish Biology](#)
- [Aquaculture associations in Australia: directory](#)

Network via Social Media

Social media is a key way to connect with your profession and hear of future opportunities. Careful use of LinkedIn, Facebook, and Twitter will expand your networks and may lead to job opportunities. Social media is widely used by employers to promote job opportunities, recruit staff and background-check job applicants.

You need to ensure you [maintain a professional social media presence](#).
