CYCLONE GILLIAN. WARNINGS, AWARENESS AND PREPAREDNESS

A HOUSEHOLD SURVEY CONDUCTED BY THE DISASTER STUDIES CENTRE OF JAMES COOK UNIVERSITY OF NORTH QUEENSLAND

TOWNSVILLE, FEBRUARY 1997

EXECUTIVE SUMMARY

RESEARCH METHOD

A survey of 200 households was carried out in all urban suburbs of Townsville and Thuringowa between 18th and 20th February, one week after cyclone Gillian had approached the coast of Townsville on Wednesday 12th February. Households were selected randomly within each suburb. The number of households selected from each suburb was based upon the number of households enumerated in each suburb in the 1991 census. Thus the sample is proportionately representative of all communities within the urban area of Townsville and Thuringowa.

Data were collected by survey, using a questionnaire instrument which was administered directly to each respondent by a team of interviewers. This enabled both a rapid turn around of interviews as well as the collection of open ended comments or opinions. Answers were coded and analysed using SPSS (Statistical Package for the Social Sciences). This report was written by David King, Director of the Centre for Disaster Studies, and interviews were carried out by Bretta Girling-King, Kate Girling-King, Tom Measham, Pip Moore, Jay Quadrio, and Tim Pulsford
